CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to a composition that, when applied to a substrate, forms an adherent, transparent, water insoluble polymeric film on the substrate surface that provides sustained antimicrobial disinfecting action for prolonged periods, without the necessity for reapplication. The coating provides surface disinfecting action by a contact-killing mechanism, and does not release its components into contacting solutions at levels that would result in solution disinfection. The polymeric film formed by the composition of the invention can be removed by treatment with dilute alcoholic base.

L13 ANSWER 2 OF 6 USPATFULL

ACCESSION NUMBER: 2000:24306 USPATFULL
TITLE: Non-leaching antimicrobial films
INVENTOR(S): Sawan, Samuel P., Tyngsboro, MA, United States
Subramanyam, Sundar, Stoneham, MA, United States
Yurkovetskiy, Alexander, Acton, MA, United States

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

5490938

AB An antimicrobial material comprising an antimicrobial metallic material and a biguanide polymer reacted with a crosslinker to form an adduct is described. Both freestanding antimicrobial materials and antimicrobial films are provided. The antimicrobial material does not release biocidal levels of leachables into a contacting solution.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.		

AB A liquid composition for applying a non-leachable antimicrobial coating on a surface. The liquid composition consists of a solution, dispersion or suspension of a biguanide polymer reacted with a cross-linking agent to form an adduct, and an antimicrobial metal material. The resulting antimicrobial coating does not release biocidal levels of leachables into surrounding solution.

AB The invention relates to a topical antimicrobial compn. contg. an antimicrobial complex that provides sustained antimicrobial disinfecting action upon contact with microorganisms for prolonged periods, without the necessity for reapplication. The topical compn. comprises a soln. or dispersion of a polymeric antimicrobial material, such as a biguanide polymer. The antimicrobial polymer is rendered insol. by coupling with a

hydrophobic agent, such as Araldite MY-720, and further complexed with a silver salt. The topical antimicrobial compn. provides both initial and residual contact-killing disinfecting activity, and does not release its antimicrobial components into contacting liqs. at levels that result in soln. disinfection.

AB The invention relates to a compn. that, when applied to a substrate, forms

an adherent, transparent, water-insol. polymeric film on the substrate surface that provides sustained antimicrobial disinfecting action for prolonged periods, without the necessity for reapplication. The preferred polymers are adduct resins obtained by the reaction of of polyhexamethylenebiguanide-HCl or its free base with bi- or polyfunctional epoxides. The antimicrobial agent is Ag, AgI or Ag(NO3). The coating provides surface disinfecting action by a contact-killing mechanism, and does not release its components into contacting solns. at levels that would result in soln. disinfection. The polymeric film formed

by the compn. can be removed by treatment with dil. alc. base.

Applications include floors, walls, diapers, surgical gowns, wound dressings, wipes, masks, hospital bed rails and carpets.

CN Oxiranemethanamine,

N,N'-(methylenedi-4,1-phenylene)bis[N-(oxiranymethyl)-
(9CI) (CA INDEX NAME)

OTHER CA INDEX NAMES:

CN Aniline, 4,4'-methylenebis[N,N-bis(2,3-epoxypropyl)- (6CI, 8CI)

OTHER NAMES:

CN **4,4'-Methylenebis[N,N-diglycidylaniline]**

CN Bis[4-(diglycidylamino)phenyl]methane

CN N,N,N',N'-Tetraglycidyl-4,4'-diaminodiphenylmethane

CN N,N,N',N'-Tetraglycidylbis(p-aminophenyl)methane

CN Tetraglycidyl 4,4'-diaminodiphenylmethane

CN Tetraglycidyl methylenedianiline
